Penta PMx™

IP Based

Penta's next-generation IP Based Digital Communications System is based around open standards IP Telephony.
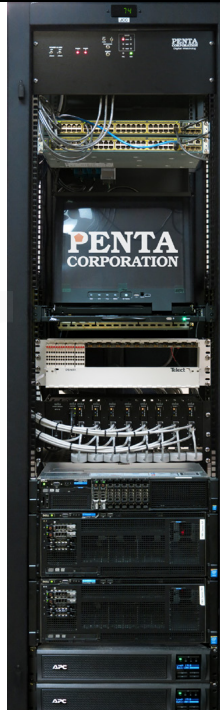

Digital Communications System

LEADER
IN VOICE AND VISUAL SYSTEMS

The PMx provides interface and control of SIP, TDM and analog networks including legacy radios, intercom circuits, radio over IP and telephone using SIP and many other interfaces.

Penta's redundant MediaServers are the core of the PMx digital media system. It works by incorporating Dialogic communication's PowerMedia HMP technology to provide highly scalable, feature-rich multimedia processing. Utilizing Penta's Digital Communication System provides complete control of the dispatcher interface. The Penta MediaServer software works in concert with the Penta Digital Console (which communicates to the SQL database on the MediaServer) to provide a communications system with complete control functionality and an intuitive dispatcher interface.

FEATURES

Redundant COTS servers

Easily scalable, flexible and cost-effective

Modern IP telephony, digital and legacy analog interfaces

SIP, phone and radio

Remote access, monitoring and supervision
